Amendments to the Specification

Please amend paragraph [97] as shown below:

 [97]   Then, the input-data handler *120* dissects the message headers and extracts from each header the portion that describes the data payload. For example, the extracted header portion may include, *e.g.*, the address of the pipeline unit *78*, the type of data in the payload, or an instance identifier that identifies the pipeline(s) ~~78_1—78_n~~ $74_1 – 74_n$ for which the data is intended.
